

IDEA

To develop a platform with which users could upload, share with their team and comment on multi-page .ppt, .pptx or .pdf documents.

Also create a mini forum to discuss issues.

SOLUTION

Three user groups have been created - ADMIN, CLIENT and USER.

Client has the ability to upload documents to the system and share access to these documents to users of his team.

If there are a lot of pages in a document, it is quite difficult to find out which page the comment refers to. To solve this problem, we developed a functional with which the user clicks in the right place on a one page of the document and creates a text comment. The user has the opportunity to review all comments throughout the document.

Also we developed function for creating topics for discussion. All users can leave their comments and "like" comments of other users under a topic.

WaggleThoughts

Has been developed a functionality that allows the client to easily create sections and topics for discussion. In order to start the discussion, just select the topic of interest and leave your opinion. If you want to support the interlocutor, for this you can use likes.

Corporate clients

Admin has the ability to view all corporate clients, their users and uploaded documents. Also, the administrator has the opportunity to get a temporary password from the client's account and under these accesses go to the personal account of this client.

All presentations

On this page client sees all documents, which he added and block with the opportunity to add new document by using "Drag & Drop" or choose the file from his system. Client can edit title and description of the document, can share document or remove it.

User activity

All recent user activities are displayed on this page. If you are interested in information on a specific user, you can use the filter.

In order for other users to evaluate your work and leave your comments, you have the opportunity to share the document with all users or with a selected group of users
